

Music, Dance, Drama management tool software

CONCERTo is a software dedicated to the management of Schools of Music, Dance and Drama. This powerful tool is designed to effectively manage all aspects of daily teaching, administrative, accounting and related materiel for an urban community or a single institution.

www.conservatoires.org

Pedagogy

- Management of multiple locations, urban communities
- Subscribe to Disciplines and Levels, assignment to group and individual Class
- Graphical Planing : Rooms, Students, Teachers, Classes and Events. Publishing and graphical modifications by "drag and drop" of planing courses.
- Events: Classes, internal and external reviews, auditions ; attendance, notes and references. Import / export teacher's notation
- Regulations learning: adjustable levels, multiple rules
- Passages, Re-and fully automated closing
- Review of assignments teachers - disciplines, statistics
- Occupations and conducting school

Inventory and equipment

- Identification of materials and objects of the institution by room inventory book
- Room's equipment, automatically calculated from the inventory in real time

Accounting

- Two separate accounts, direct Board
- Instalment forecast, call and reminder fees, receipts, bank deposit

All media (including instruments)

- Actions definable : loan, lease, sale, trash...
- Loans to students and teachers
- History of movements
- Research sophisticated

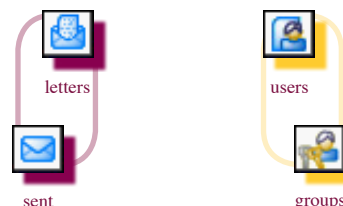

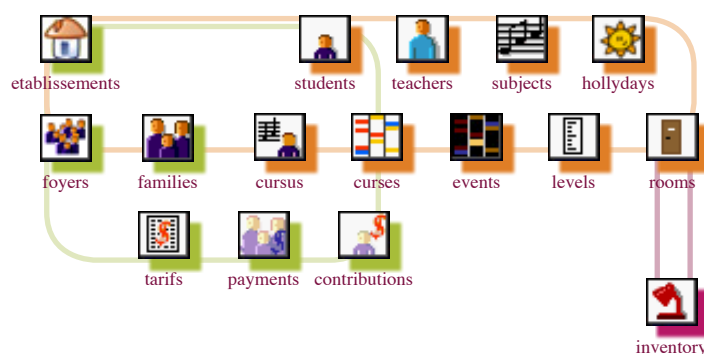

Tools, editions, imports and exports, statistics...

Postale & e-mailing

- Word processor "Word" compatible integrated
- Mailing, e-mailing and mass mailing

Access and Security

- Right of access and privileges groups
- User's preferences

CONCERTo

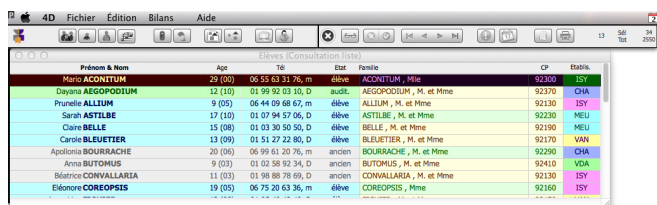

Software Structure

Like any professional software management database, CONCERTo offers a structured and relevant structure and a unique storage location data, and an instant update of data. It ensures referential integrity by a unique numbering system.

CONCERTo is based on the 4D development tool. But this powerful development tool is advantageously supported by our exclusive generic features, thoughts and developed for efficient use on a daily basis. They are listed below.

Ergonomics

CONCERTo offers a palette of icons which contains the most frequently used tables (families, students, teachers, subjects, etc.) and a tool-bar that contains icons for software generic functionality (navigation, search, edit, report, memories). With this structure, you have immediate access to software functions and windows are not overloaded.

Prénom & Nom	Age	Sexe	Etat	Famille	CP	Statut
Marc ACONITUM	29 (00)	06 55 63 31 76, m	élève	ACONITUM, Mlle	92300	ISY

Eléonore COREOPSIS	19 (05)	06 75 20 63 36, m	élève	COREOPSIS, Mme	92160	ISY

Sheets, in addition to presenting their own fields, displayed as icons, lists and sub-lists the data records that are related. These data are editable (if you have right user privileges) wherever they are found with tools for adding, modifying and deleting.

Redundancy thoughtful and structured data display allows you to quickly access different tables. The goal : to simplify access to data by preventing you open dozens of windows. You just have to choose depending on the task the shortest path !

No endpoint in the database, the navigation has no limit : in the cards, double-click on the icon opens the related records, lists included in the list can be opened in their own table, etc..

Finally, for better data access, navigation is also multi-lists and multi-cards. You can open as many lists and records as you want and even multiple list instances of the same table (to leave a job "in the state" and treat ponctuellement other data).

When information are numerous, sheets contain tabs that structure the data consistently. Very practical : the cards have memory of last used tab.

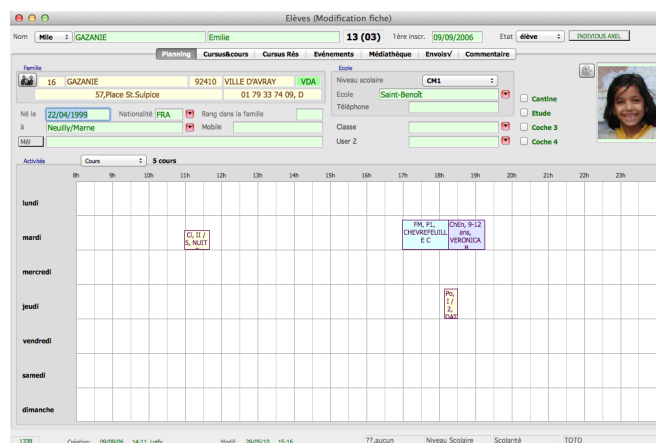

Lists with keyboard's mark : type the beginning of a name, a label of study or room, and the list mark sheets starting with what you typed and shifts to the first occurrence. Very handy for quickly finding all the records you want.

Sorting columns : in the column header, the current sort column is displayed in bold, click on another header selects directly a new sort column.

All search functions, sorting and printing are implemented for your business : each table as a specific menu, its consistent criteria for Advanced Research (contextual interactive objects advantageously replace the standard flat search card of 4D).

The report's tool will help you to transfer a selection of records from one table to another (eg, a selection of courses opens the corresponding selection of students). The memory function allows you to record table's selections which you can then apply set operations.

Color is used in a functional sense, for an instant view of the operating mode (add / edit / review), the status of records (active / inactive) and their fields. In lists, it is used to quickly locate records according to certain criteria (postal code for families, active state for students, etc.). These colors are of course configurable.

Activité	9h	9h30	10h	10h30	11h	11h30	12h	12h30	13h	13h30	14h	14h30	15h	15h30	16h	16h30	17h	17h30	18h	18h30	19h	19h30	20h	20h30	21h	21h30	22h	22h30
